

HOW TO MAKE THE 3D GLASSES

1. Cut out the three shapes along the outline.
2. Cut a square of blue and a square of red cellophane (slightly bigger than the square lens holes) and glue each to the inside of the glasses frame.
3. Fold the dotted lines of the main glasses and the arms to create little flaps.
4. Glue the flaps on the arms and the glasses together to create a glasses frame.
5. Allow glue to dry before putting them on.
6. Take them to see Coraline, which hit cinemas on the 6 August!
